

NEW

FISHER FAUCETS

with Ceramic Disk Stems are an elevated level of convenience!

FISHER
MANUFACTURING COMPANY
Commercial Faucets Since 1936

Streamline your operation with Fisher's Ceramic Disk Stems, the smart choice for any application.

At Fisher, quality isn't a goal, it's our daily commitment. Every product we make reflects our unwavering dedication to excellence. That is why we have partnered with Flühs, a German Engineering and Manufacturing company, to help us design and produce these new ceramic disk stems. We understand that quality is the outcome of relentless effort, and it's a standard we uphold in every faucet, pre-rinse unit and component we craft.

Fisher faucets with Ceramic Disk Stems feature a higher level of engineering with a stylish new look.

No need to stock two configurations of control valves, they now come standard with swivel & rigid outlets.

No confusion when ordering stems as they will operate in both check and swivel applications.

Larger opening for faster filling with less heat loss.

Easily identify Fisher faucets with new ceramic disk stems by the laser-engraved Fisher logo.

German designed with the commercial kitchen operator in mind.

The new Ceramic Disk Stems are currently available in Fisher's 1/2" Faucets, Pre-Rinse Units, Service Sink Faucets, Pot Fillers Units and Utility Spray Units.
